## 1. Outline of the program

In order for medical and healthcare innovation in Japan to be accelerated and disseminated worldwide, a system for training outstanding personnel capable of undertaking cutting-edge research and development, needs to be established strategically. Based on this idea, the Graduate Program for Medical Innovation aims to train both MD (medical doctor) students and non-MD students to be medical innovators with a global mindset. This will be achieved through collaboration between accomplished medical, pharmaceutical, and health science researchers at Kyoto University.

Kyoto University has been pursuing the world's highest level of research and has produced internationally-recognized researchers including Nobel laureates. Curriculums that take advantage of this research-based strength of the university have been established by the Graduate School of Medicine, Graduate School of Pharmaceutical Sciences, Center for iPS Cell Research and Application (CiRA), and Institute for the Advanced Study of Human Biology (ASHBi), operating under the World Premier International Research Initiative (WPI).

This program is a 5-year doctoral program. For students who fulfill the requirements for completion of the program in addition to attending and completing the curriculum in their departments, a statement certifying the completion of the Graduate Program for Medical Innovation will be added to the student's diploma.

#### 2. Features of the curriculum

Unlike conventional core courses, students in the program can take "core medical education courses" and "Graduate Courses for Integrated Research Training (GCIRT)" that fit their background and research objectives to customize their education. The requirements for courses and number of credits specified by each graduate school, which are also required for completion of the program, should still be met.

GCIRT offer the colloquium-type lectures and exercises in English without being bound by the division of student's laboratory.

In "core medical education courses", students will acquire systematic knowledge and concepts of basic medicine by taking courses according to their backgrounds.

In "Group of courses for career development and improvement of skills" show students various career paths that have not been covered by conventional medical education. To help students acquire the knowledge and ideas required for becoming next-generation innovators, lecturers are invited from external partner organizations and companies.

## 3. Program Completion Requirements

Students must satisfy the following requirements to complete the Graduate Program for Medical Innovation (MIP).

- (1) Must satisfy the complete requirements of their graduate school
- (2) Must complete 6 credits in minimum in "Graduate Courses for Integrated Research Training".

  Students are required to continue to participate in Graduate Courses for Integrated Research Training after they have obtained the credits required for completion of the Course.

- (3) Must complete 4 credits in minimum in courses of "Core Medical Education Courses"
  - \* Student who have taken the courses in "Core Medical Education Courses" or their equivalent may be exempt from courses in "Core Medical Education Courses"
  - \* International students allowed to take courses designated by the program provided in English by Liberal Arts and general education as the alternative for courses of "Core Medical Education Courses".
- (4) Must complete 2 credits in minimum in courses of "Group of courses for career development and improvement of skills"
- (5) Must complete either "Internship in Japan or abroad" or "(Interdisciplinary) Joint research project"
- (6) Must pass the final screening of the Graduate Program for Medical Innovation

\*QE is conducted from D1 to D4 for the 5-year doctoral course students.

## 4. Qualifying Examination (QE)

Multiple supervisors conduct qualifying examinations at multiple stages.

## 5. Program Final Screening and Certification

Students will give a presentation on the research of their dissertation and answer questions. In addition, the student will discuss and evaluate measures to return the research results to society. Based on the above, it is evaluated that the student has the academic knowledge and research ability appropriate for completion of the program, a statement certifying the completion of the Graduate Program for Medical Innovation will be added to the student's diploma.

#### 6. Course Information

#### 6-1. Group of core courses

#### (1) Graduate Courses for Integrated Research Training (GCIRT)

Must complete 6 credits in minimum in "Graduate Courses for Integrated Research Training". Students are required to continue to participate in Graduate Courses for Integrated Research Training after they have obtained the credits required for completion of the Course.

If you are planning to register for multiple courses, specify your principal course. If you are selected, your evaluation will be based on the activities in the principal course you specified. The faculty staff in the course you specified will be your supervisor for this program.

#### (2) Core Medical Education Courses

Must complete 4 credits in minimum in courses of "Core Medical Education Courses"

- \* All graduates of medical schools in Japan are exempted from taking "Core Medical Education Courses".
- \* Student who have taken the courses in "Core Medical Education Courses" or their equivalent may be exempt from courses in "Core Medical Education Courses"
- \* International students allowed to take courses designated by the program provided in English by Liberal Arts and general education as the alternative for courses of "Core Medical Education Courses". If you wish to take these courses, please check the syllabus of the KULASIS (Liberal Arts and general education) and register for it by KLASIS.

#### 6-2. Group of courses for career development and improvement of skills

Must complete 2 credits in minimum in courses of "Group of courses for career development and improvement of skills".

Students may take this course in any year, but it is recommended that they take it after taking the "Group of core courses.

However, it is recommended that students take the "Frontier type Human Resource Development in Medical Science" as early as possible, as it provides important team building and communication skills for research.

International students can count the credits earned by taking "ILAS Seminar-E2: Ethical issues in health sciences" or "ILAS Seminar-E2: Critical thinking and Communication skills" as credits of "Group of courses for career development and improvement of skills ". If you wish to take these courses, please check the syllabus of the KULASIS (Liberal Arts and general education) and register for it by KLASIS. Note that advance registration is required for ILAS seminars.

\* The above ILAS Seminar subjects will not be held in 2024.

#### 6-3. (Interdisciplinary) Joint research project. Internship

Students are required to participate in either an Interdisciplinary Joint Research project or an overseas or domestic internship.

#### 6-4. Credits earned prior to the start of the program

Students of the special selection for the second year and the transfer to the third year who have earned credits in the Group of core courses and Group of courses for career development and improvement of skills before starting this program will be counted as credits earned in this program.

#### 6-5. Grading criteria, objections and appeals regarding grading

The rules of the department offering the subject shall apply.

#### 7. Portfolio

Students enrolled in this program will be required to fill in the portfolio system of their research progress and results (papers, conference presentations, etc.). The portfolio will be used for QE and the selection of financial aid such as RF.

## 8. Financial Support

There is a system for providing Research Fellows (RF) compensation to students in a doctorate course, in a 4-year doctorate course or in 3rd year or later of a 5-year doctoral course after selection. The compensation is approximately 100,000 yen per month. The details of this financial support are subject to change.
